

EPISODE 5 · AI-VANTAGE

From Prompt to System

KEY TAKEAWAYS

- 1** A single good prompt is a trick. A system of prompts working together is a product.
- 2** Every prompt system needs: (1) a fixed role/system prompt, (2) structured input/output, (3) a check before it ships.
- 3** Worked example: a WhatsApp enquiry sorter — classify, route, then check before a human sees the draft.
- 4** Small, boring, testable steps are what make a system trustworthy enough to run unattended.
- 5** This week: break one repeated freeform prompt task into 2-3 fixed steps with defined input/output.
